Designer SAMULI NAAMANKA – Finland for Arktis - Finland, UPM Grada - Finland,

PROJECTS

HOHTO NEW CHAIR by Samuli Naamanka

UPM Grada's forming properties enable the chairs unique 3D form. First launch with Hallingdal upholstery fabric by **Kvadrat**.

La sedia **Hohto** è stata progettata da Samuli Naamanka e venduta da Arktis. Le proprietà di forgiatura di UPM Grada conferiscono alle sedie un'inconfondibile sagoma 3D.

The HOHTO chair prototype is the outcome of the possibilities provided by innovative UPM Grada thermoformable wood material as well as Finnish furniture manufacturer ARKTIS. It manufactures aesthetic, functional and long-lasting high-quality furniture suitable for both public spaces and home interiors. www.arktis.fi. UPM Grada® is a new thermoform-able wood material for the form pressing industry. Grada technology renews the forming of wood by using only heat and pressure. It also opens up new design opportunities unachievable with the traditional methods. UPM Grada's unique forming properties enable high quality and ecological designs which are also visually appealing. Grada glue-line does not contain formaldehyde or other harmful compounds and the panel can be safely recycled. www.upmgrada.com
